

Peer Review Services

Peer Review Services

Peer review has been defined as a process of subjecting an author's scholarly work, research or ideas to the scrutiny of others who are experts in the same field. It functions to encourage authors to meet the accepted high standards of their discipline and to control the dissemination of research data to ensure that unwarranted claims, unacceptable interpretations or personal views are not published without prior expert review.

Pubrica peer review process

- > Send us your manuscript that needs to be reviewed peer review
- > Our panel of experts at Pubrica, will check and provide feedback on the submitting academic's ideas and research techniques in terms
 - > Whether a scholarly work falls within the journal scope to check whether the research topic has been clearly formulated, and to decide if a suitable approach has been taken to address the scientific issues involved;
 - > Whether the reviewer also examines the methodology to determine whether the author's results can be reproduced, and he or she assesses the novelty and originality of the research findings. If a work involves patients or animals, then the peer review will also cover ethical aspects;
 - > Whether the reviewer will also rate the 'readability' of the work, assessing how logically the argument has been constructed and whether the conclusions are well founded. In addition, the author of the work will generally receive useful advice on how to improve their work;
 - > Finally, we provide you a report that forms the basis for deciding whether the work should be acceptable or needs revision.
